

## **FolderPage Platform Development - First Project Description**

I need two Oxwall plugins updated, (These two plugins are very similar.)

- 1) Files Uploads
- 2) Files for Groups

Both are available in the Oxwall store but have been discontinued by the developer and free to use. I will send you these existing Oxwall plugins as Zip files so you will be able to see the code, modify and add as necessary.

I hope you can give a good price, because I want you to continue providing me with support for similar projects.

Feel free to also advise me on improvements and make suggestions.

### **For both plugins:**

- Ensure that they work perfectly with the latest version of Oxwall (ver. 1.84)
- Ensure plugins use cloud support (Amazon S3). Therefore files will be stored in Amazon S3 bucket using Oxwall's built in S3 cloud support.
- Both plugins generate widgets, ensure all file names are truncated for each widget. (3 or less words)
- Ensure file icons in file pages are properly spaced and names are properly truncated
- When a file is deleted, also delete the corresponding newsfeed entry.
- Truncate File Names for Mobile version and ensure file icons are properly spaced.

### **For “Files Upload” Plugin specifically:**

- The “docx” file extension does not have a proper icon associated with it (maybe you can copy the “doc” icon and rename it to make the association)
